DWAYNE Token Tackle World Hunger Together

DWAYNE Paper

A MESSAGE TO VITALIK

Without trying to blow smoke, we are great fans of you and your contributions to the blockchain community. We also know that you genuinely care about creating a better future for this earth and therefore chose you as the trusted safekeeper of 90% of the total supply of DWAYNE tokens. When the time comes for DWAYNE to do good in this world, we ask you to donate the proceeds that come from your stake in DWAYNE to organisations like the WFP to battle world hunger or the Charity Right organisation who build schools in improvised areas, provide ten million meals a year to children and thereby provide a conduit for these children to break the mould of poverty by way of education.

We believe that in the crazy world of Doge and Shiba-Inu, it is now the right time to use the power of the meme token to tackle one of the biggest humanitarian crises in our history and to make our planet a little better.

We also listened to your conversation with Lex Fridman and know that you tend to revert ERC20 tokens that you receive to your hot wallets, therefore we made it a little bit harder for you to send DWAYNE tokens back to us and sent them to your <u>cold wallet Vb3</u>. This should make it a little more inconvenient for you to just send the tokens back to us and you will hopefully only go through the trouble when DWAYNE reaches its full potential (we are aiming for a \$ 50B market cap for DWYN by the end of 2022) so we ask you to be patient and see what DWAYNE will be able to achieve in just 1 year.

We know that we are trusting you with a lot of power over the DWAYNE project, especially since we are launching the remaining 10% of DWAYNE supply on Uniswap and are therefore making ourselves vulnerable to you rugging the project. However, we are confident in you to use your power only when contributing to the benefit of ending world hunger, once and for all.

Thank you, The DWAYNE team

ABOUT US

"Once you're facing in the right direction, all you need to do is put one foot forward."

Based in the heart of London, DWAYNE is an international community that traverses across ethnicity, religion, social class, gender and stands against all forms of discrimination.

We believe in treating everyone with dignity and respect and championing the rights and contribution of all to free the world of hunger. We strive for equality, honesty and justice for every human life.

We are committed on an international basis without borders to saving lives of malnourished children and their families to beat hunger.

Our community will champion a global movement to end life threatening hunger for good. Sustainability involves tackling the cause and effect of hunger including nutrition, education and livelihoods programmes.

INTRODUCTION – ELON'S PROMISE

Around the world, we produce more than enough food to feed the global population- but more than 810 million still go to bed hungry every night. DWAYNE is here to change that. Inspired by the latest <u>Twitter controversy</u> over how much of Elon Musk's net worth would solve world hunger, the team behind DWAYNE thought that he might need some backup to tackle such a giant undertaking and declared the race to battle world hunger to be on!

On Oct 31st 2021, Elon committed to selling enough Tesla stock to solve world hunger if the WFP can give him a detailed plan how the funds will be utilised.

Less than 1 week later, on Nov 6th 2021, Elon held a <u>poll</u> whether he should sell 10% of his Tesla stock, promising to abide by the result of the poll.

We believe that those 2 events are linked, and that Elon is planning to use a significant amount of his stock sale to tackle yet another of the planet's most pressing issues: world hunger. But is it going to be enough? And is it going to come fast enough? We believe that, with the power and efficiency of crypto, DWAYNE can accelerate the funding.

Furthermore, the WFP responded with a <u>one-time appeal to</u> <u>billionaires</u> to join the cause and to raise US\$6.6 billion together. The race to tackle hunger is on!

The objective of this project therefore is, to raise funds faster. We truly believe that now is the perfect time for crypto to step up and show the world how the immense power of decentralised finance can be used to make a significant positive impact on the lives of millions of hungry children and their families, all while achieving great returns for DWAYNE token hodlers. Vitalik, we count on you to hold up your end of the bargain.

TACKLE WORLD HUNGER

"Food and medicine are not two different things: They are the front and back of one body" - 福岡 正信 Masanobu Fukuoka

World hunger is on the rise

Even before the Coronavirus pandemic, the world was disastrously off track to meet the United Nations target of achieving zero hunger by 2030. Now, Covid-19 and lockdown measures aimed at stopping the virus have made it even more challenging to achieve this goal. According to the UN Hunger Report, hunger is the term used to define periods when populations are experiencing severe food insecurity – meaning they go for entire days without eating due to lack of money, food or other resources.

Hunger is not just a third world problem. Recently in the UK, Marcus Rashford, a well-known professional footballer, became involved in the campaign for free school meals in 2020, when school closures in lockdown meant that children in need might have missed out on the free daily meal provided by schools – a lifeline for many families.

Here are some widely accepted definitions of key terms according to UNICEF

- Hunger is the distress associated with lack of food. The threshold for food deprivation, or under-nourishment, is fewer than 1800 calories per day.
- Undernourishment goes beyond calories to signify deficiencies in energy protein, and/or essential vitamins and minerals.
- Malnutrition refers more broadly to both undernutrition and overnutrition (problems with unbalanced diets).
- Food security relates to food availability and access. When a person always has enough accessibility and availability to safe and nutritious food to maintain an active and healthy life, they're considered food secure.

TACKLE WORLD HUNGER

Fact & Figures

- 30 million people were affected by hunger as a result of Covid-19
- 1 in 9 Globally are hungry or undernourished
- 2.37 billion people did not have access to enough safe and nutritious food in 2020
- There are many reasons why people suffer hunger. We know that conflict, climate change, poor access to healthcare and inequality are underlying drivers of the hunger crisis.

Climate shocks and extreme weather

The climate crisis is driving a rise in extreme weather around the world leading to more frequent droughts and floods. These can lead to crop failures and loss of income for families which means they struggle to feed their families. Moreover, the resultant supply shock and scarcity of food pushes up prices for the rest of the population. These inflationary spikes push more people below the breadline.

Conflict

Long and complex conflicts also affect millions of people around the world. They can lead to the sudden large-scale displacement of people who often end up living in makeshift camps with no income or means for building a life worth living.

Gender inequality

Gender inequality also plays a role in driving malnutrition, as often women and girls eat last and least in many households. A third of all women of reproductive age worldwide suffer anaemia, caused by iron deficiency. Teenage mothers and their babies can particularly be vulnerable to malnutrition.

TACKLE WORLD HUNGER

Poverty

Poverty and inequality are also leading drivers of hunger and malnutrition. More and more countries have both high levels of hunger in some regions and obesity in others. The increasingly unequal distribution of wealth means that many people are missing out on nutritious food and going hungry, even in countries with high levels of economic development.

The divide between rich and poor is expanding The world's richest 1% have more than twice as much wealth as 6.9 billion people. Almost half of humanity is living on less than \$5.50 a day.

Billionaires have now more wealth than the 4.6 billion people who make up 60 percent of the planet's population.

Often those living in poverty skip meals or consume cheaper nutritionpoor food, putting their health at risk

Covid-19

The impact of Covid-19 means 30 million more people around the world are suffering from hunger. While the threat of the pandemic continues, measures to stop the spread of the virus could lead to even greater levels of hunger as food becomes harder to access.

Hunger has a devastating impact upon children

- More than 2 million children die from malnutrition worldwide every year.
- 75% of malnourished children under the age of five do not get the treatment that they need.
- 10,000 more children under five could die of malnutrition every month as a result of Covid-19

WHY ETHEREUM?

With the current proof of work (PoW) consensus algorithm, Ethereum gas fees have become very expensive recently. So when we had to choose the blockchain platform to launch DWAYNE on, we were concerned that this might break the viability for the trading of our token (currently, a Uniswap transaction costs in the realm of \$US100, which would violate our commitment for inclusion of anyone who wants to trade DWYN).

However, with Ethereum 2.0 around the corner, there was little debate amongst the founding team about which blockchain to use for this project. Ethereum 2.0 will be the only truly decentralized proof of stake (PoS) blockchain that will be scalable for the masses and therefore be the best future-proof solution for DWAYNE.

Ethereum 2.0 is launching in several phases with the first upgrade, called the Beacon Chain, already having gone live successfully on December 1, 2020. The Beacon Chain introduced native staking to the Ethereum blockchain, a key feature of the network's shift to a PoS consensus mechanism. As the name suggests, it is a separate blockchain from the Ethereum mainnet.

The second phase, called The Merge, is expected in the first or second quarter of 2022 and will merge the Beacon Chain with the Ethereum mainnet. The Merge will be a cataclysmic event in Ethereum's and therefore the entire crypto market's history.

Fast, cheap transactions will then allow the DWAYNE Token to be a popular and frequently traded asset that will be here to stay for decades on the most advanced and futureproof blockchain technology on the planet. And the fee for a Uniswap transaction is going to drastically fall from currently ca. \$US 100 to only a few cents.

Read more about the Ethereum 2.0 roadmap <u>here</u>.

\$DWYN LIQUIDITY

The DWAYNE Token will be launched on the world's most popular DeFi exchange Uniswap with 100% of its free circulating supply (as 90% of it's total supply are kept safe by Vitalik). This way, we are avoiding whale wallets that could negatively impact the price of \$DWYN in the future.

Uniswap V3 offers great new features compared to its predecessor V2 such as setting a minimum threshold of the token price. For DWYN, this minimum price will be equal to its launching price, guaranteeing that the price will NEVER fall below its initial launch value on Uniswap.

The fee tier for the DWYN/WETH liquidity pool will be 1% (recommended by Uniswap for exotic tokens).

The DWYN/WETH liquidity pool details can be found <u>here</u> (search for DWYN).

\$DWYN Price in Uniswap V3

The price of \$DWYN tokens in the above-mentioned liquidity pool follows a strictly deterministic pricing algorithm. The more ETH is swapped against \$DWYN, the higher the price of \$DWYN will be and vice versa. Uniswap V3 also offers a great new feature called "Concentrated Liquidity" which has been utilized in the DWNY/WETH liquidity pool. Concentrated liquidity allowed us to set a minimum price for \$DWYN. When launching the liquidity pool, we set this minimum price to 0.000000000005067 ETH/DWYN, equal to to initial price of \$DWYN. What this means in practice is, that the price of \$DWYN will never be able to fall below the initial launch price in the DWYN/WETH liquidity pool. This gives early investors a great level of security and minimizes their risk of price fluctuations greatly. Find out more about the deterministic Uniswap V3 pricing algorithm <u>here</u>.

CONCLUSION

"The most ironic outcome is the most likely" - Elon Musk

It all started with a tweet and an idea. What would happen if the world's most influential blockchain personality would meet with a project that is solely focused on solving one of the most pressing humanitarian crisis in world history, all fuelled by a vocal tech billionaire's wild Twitter posts.

To summarise DWAYNE's value proposition:

DWAYNE aims to become worlds first and largest ESG token that focuses on hunger and food inequality.

90% of the total supply of \$DWYN is being safekept by Vitalik and shall be used as donations to tackle world hunger in several stages and without crashing the price of \$DWYN.

100% of the remaining supply is distributed amongst the general public through Uniswap V3. Since the initial price of \$DWYN is equal to the minimum price in its concentrated liquidity, DWYN will NEVER fall below it's initial price in the \$DWYN/WETH liquidity pool.

While the idea behind DWAYNE is to make a fun and entertaining meme token, the idea behind its inception is serious. The DWAYNE team is treating the issue of world hunger as a matter of utmost importance and is committed to making a substantial impact on this problem in the nearterm future and for decades to come.

We would like to thank each and everyone of the DWAYNE token hodlers¹, without your participation, this would not be possible.

It's time to start a new era of ESG meme tokens and we invite you to be part of this exciting future.

- Miyamoto Musashi, founder of DWAYNE

1) Hodl is life
